

ENGR 196A
Survival and Success Skills for Freshmen Engineers
Fall 2006
University of Arizona

Now that we've talked about some study strategies, take a few moments to lay out a plan for the classes you are having the most difficulty in. You should write a short statement that summarizes:

- 1) Why a particular class is not going well.
- 2) The actions you will take to improve your performance.
- 3) Identify ways of evaluating your success in improving besides using your next text score in the class.
- 4) A list of other things to try if this first method does not work.
